## **Welcome...**

**We pride ourselves on being your full service partner in the green industry. We are committed to excellence in customer satisfaction. Our full scale nursery and tree production offer locally grown products at affordable prices. Thank you for your business.**

**Ron Shimon  
Owner/Operator**

## **Plant Guarantee**

All of our plants have a **one year guarantee** from the date of the purchase. This guarantee covers the **plant only**. If you wish to have the plant delivered and reinstalled then there may be additional charges due.

## **Planting Instructions**

### **Planting:**

Place some dirt back into the bottom of your hole. This promotes root growth and a faster growth rate for the plant. Place your tree upright into the hole and begin to backfill the hole with dirt, and if desired some premium soil from your local garden shop. You want to be sure that the original soil line of the plant is even with the ground. While filling, pack the ground gently and add water to fill any air holes.

### **Watering:**

Most new trees/shrubs need general watering the first weeks/months they are in your yard. It is best to water in the mornings and evenings so the heat of the sun is not a factor. Be careful not to over water. During a dry spell, be sure to deeply water your tree and the surrounding soil once a week.

### **Mulch:**

Mulch is a tree/shrub's best friend. It keeps down grasses and weeds that will compete with your new plants roots for water, and also helps the soil retain water. It helps the soil from becoming overly compacted and acts as an insulator during the winter months. Create a mulch bed around your tree that is 2-3 inches thick, while encircling your tree with a several foot diameter. It is also recommended to leave a slight area mulch free just where your trunk reaches the ground to avoid bacteria and rotting.
